The civil engineering sector accounts for a significant percentage of global material and energy consumption and is a major contributor of waste material. The ability to recycle and reuse concrete and demolition waste is critical to reducing environmental impacts in meeting national, regional and global environmental targets. Handbook of recycled concrete and demolition waste summarises key recent research in achieving these goals. Part one considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants and the economics of managing construction and demolition waste. Part two reviews key steps in handling construction and demolition waste. It begins with a comparison between conventional demolition and construction techniques before going on to discuss the preparation, refinement and quality control of concrete aggregates produced from waste. It concludes by assessing the mechanical properties, strength and durability of concrete made using recycled aggregates. Part three includes examples of the use of recycled aggregates in applications such as roads, pavements, high-performance concrete and alkali-activated or geopolymer cements. Finally, the book discusses environmental and safety issues such as the removal of gypsum, asbestos and alkali-silica reaction (ASR) concrete, as well as life-cycle analysis of concrete with recycled aggregates. Handbook of recycled concrete and demolition waste is a standard reference for all those involved in the civil engineering sector, as well as academic researchers in the field. Summarises key recent research in recycling and reusing concrete and demolition waste to reduce environmental impacts and meet national, regional and global environmental targets Considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants Reviews key steps in handling construction and demolition waste

Provides guidance on controlling asbestos-containing materials (ACM) found in buildings. Provides a current summary of data on exposure to airborne asbestos; gives survey procedures for determining if ACM is present in buildings; explains how to establish a special operations and maintenance program in a building found to contain asbestos; reviews technical issues confronted when assessing the potential for exposure to airborne asbestos, in particular indoor settings; suggests a structured process for selecting a particular course of action, and much more. Commonly referred to as the Blue Book.

This heavily illustrated publication is aimed at people carrying out asbestos surveys and people with specific responsibilities for managing asbestos in non-domestic premises under the Control of Asbestos Regulations 2012. The book covers competence and quality assurance and surveys, including: survey planning, carrying out surveys, the survey report and the dutyholder's use of the survey information. It includes extensive appendices and references.

Air Pollution Control Law provides explanation of the legislative provisions, regulatory requirements, and court decisions that comprise the body of air pollution control law.

The second edition of International Health and Safety at Work has been specially written in simple English for the thousands of students who complete the NEBOSH International Certificate in Health and Safety each year. Fully updated and matched to the March 2011 syllabus, this course book provides students with all they need to tackle the course with confidence. Full colour pages and over 200 illustrations bring health and safety to life. Each chapter starts with learning outcome summaries and ends with questions taken from recent NEBOSH examinations. Specimen answers and a study skills chapter are also included to aid exam preparation. Endorsed by NEBOSH for the International General Certificate in Occupational Health and Safety. Provides all the material students need for the course including tables, forms and checklists that can be used for health and safety activities such as risk assessment Gives a unique summary of Occupational Health and Safety legal frameworks in over 20 countries including the EU and USA plus details of several ILO conventions and recommendations which are useful to students and a wide range of managers This NEBOSH-endorsed textbook introduces the reader to the fundamentals of health and safety in the workplace from an international perspective. The book not only meets the needs of students on the NEBOSH course but remains a useful reference for all managers who work to international standards and need to adapt them to local needs and practice. Phil Hughes MBE, MSc, CFIOSH, is a former Chairman of NEBOSH (1995-2001), former President of IOSH (1990-1991) and runs his own consultancy. He received an MBE for services to health and safety and as director of RoSPA in the New Year's Honours List 2005. Ed Ferrett PhD, BSc (Hons Eng), CEng, MIMechE, MIET, CMIOSH, is a former Vice Chairman of NEBOSH (1999-2008) and a lecturer on various NEBOSH health and safety courses. He is a Chartered Engineer and a health and safety consultant.
