Carotenoids are of great interest due to their essential biological functions in both plants and animals. However, the properties and functions of carotenoids in natural systems are surprisingly complex. With an emphasis on the chemical aspects of these compounds, Carotenoids: Physical, Chemical, and Biological Functions and Properties

presents a broad overview and recent developments with respect to understanding carotenoid structure, electronic and photochemical properties, and the use of novel analytical methods in the detection and characterization of carotenoids and their actions. The text also explores LC/MS and LC/MS/MS techniques as well as new applications of PCR and molecular biology methodologies.

This book contains 14 carefully reviewed and selected papers from the 4th Workshop on Global Sourcing, held in Zermatt, Switzerland, March 22-25, 2010. They have been gleaned from a vast empirical base brought together by leading researchers of outsourcing and off shoring. This volume is intended for use by students, academics and practitioners interested in the outsourcing and off shoring of information technology and business processes. It offers a review of the key topics in outsourcing and off shoring, populated with practical frameworks that serve as a tool kit to students and managers. The sourcing models available to client firms are discussed in great depth. Vendor capabilities as well as client capabilities are studied and links are offered to the various sourcing models. Issues pertaining to knowledge and expertise are also discussed. Last but not least, the book examines current and future trends in outsourcing and off shoring, paying particular attention to the role that CIOs will play in shaping their sourcing strategies.

This book presents the authoritative print bibliography of current scholarship on the Dead Sea Scrolls, Qumran, and related fields (including New Testament studies); source, subject, and language indices facilitate its use by scholars and students within and outside the field.

In the course of history, humans have attempted to interrupt the physiological and psychological bond formed between a nursing mother and her child by substituting breastfeeding with artificial formulas. A growing body of evidence indicates that breast milk, quite apart from its unsurpassed nutritive value, contains a large number of substances that protect the offspring from common infectious agents and allergens and promote the maturation of the gastrointestinal tract and the immune system. In addition to well described milk antibodies and soluble mediators of innate immunity, milk cells and pluripotent secreted factors - cytokines - are currently in the forefront of extensive research with respect to their importance in milk immunology. The purpose of this conference was to critically evaluate the current state of our knowledge concerning the protective role of immune agents found in milk, to provide up-to-date information of milk factors with respect to their role in the maturation of immunological defense systems in the neonate, and to reassess the importance of breastfeeding in the prevention of allergies in formula-fed infants. We hope that the work presented by international participants will prompt many new ideas and stimulate further research in this important area. This conference was sponsored primarily by the National Institute of Child Health and Human Development, National Institutes of Health, Bethesda, MD. We would like to thank Drs. Sumner Yaffe and Delbert Dayton for their efforts with the organization, planning, and support of this conference.

The Human Mitochondrial Genome: From Basic Biology to Disease offers a comprehensive, up-to-date examination of human mitochondrial genomics, connecting basic research to translational medicine across a range of disease types. Here, international experts discuss the essential biology of human mitochondrial DNA (mtDNA), including its maintenance, repair, segregation, and heredity. Furthermore, mtDNA evolution and exploitation, mutations, methods, and models for functional studies of mtDNA are dealt with. Disease discussion is accompanied by approaches for treatment strategies, with disease areas discussed including cancer, neurodegenerative, age-related, mtDNA depletion, deletion, and point mutation diseases. Nucleosides supplementation, mitoTALENs, and mitoZNF nucleases are among the therapeutic approaches examined in-depth. With increasing funding for mtDNA studies, many clinicians and clinician scientists are turning their attention to mtDNA disease association. This book provides the tools and background knowledge required to perform new, impactful research in this exciting space, from distinguishing a haplogroup-defining variant or disease-related mutation to exploring emerging therapeutic pathways. Fully examines recent advances and technological innovations in the field, enabling new mtDNA studies, variant and mutation identification, pathogenic assessment, and therapies Disease discussion accompanied by diagnostic and therapeutic strategies currently implemented clinically Outlines and discusses essential research protocols and perspectives for young scientists to pick up Features an international team of authoritative contributors from basic biologists to clinician-scientists
