a. Temperature goes up and the level of carbon dioxide goes down. This is because cellular respiration is an exergonic process that is only about 38% efficient; the remaining energy is lost to the environment as heat. Also, carbon dioxide is being converted to organic molecules such as fats and sugars during cellular respiration. b.

Chapter 9 (Cellular Respiration and Fermentation) Vocabulary

A chemical cycle involving eight steps that completes the metabolic breakdown of glucose molecules begun in glycolysis by oxidizing pyruvate to carbon dioxide; occurs within the mitochondrion in eukaryotic cells and in the cytosol of prokaryotes; the second major stage in cellular respiration

AP Bio vocabulary chapter 9 - Cellular Respiration

In Chapter 9, students will learn how cellular respiration and fermentation provide organisms with the energy they need to survive. Students will show this understand- ing by interpreting multiple, detailed gures. They will also practice their data analysis skills by collecting and interpreting data on the byproducts of cellular respiration.
