In this contemporary look at the world of workbenches, Lon Schleining takes us on a guided tour of a wide variety of classic, modern, and specialty benches and offers hundreds of options for choosing or building that perfect bench and its accessories. This is a fresh look at the classic subject with a focus on helping readers find the right bench and accessories for their needs. The object is to guide the reader through making critical choices, including whether to buy it or build it. Even long-time woodworkers dream of the perfect bench and the time to build it, and for them, the real enjoyment is in the planning. With nearly 300 photos and drawings, The Workbench provides in-depth information along with the inspiration to fulfill workshop dreams.

The Cape Flats, that windswept, treeless, barren, sandy area between two oceans at Africa's southern tip, is home to more than a million people, approximately one quarter of Cape Town's population. Many live in the sprawling shack settlements that ring the city. The post-apartheid state is attempting to eradicate such settlements by providing formal houses in planned residential estates. This book describes, over 17 years, the lives of the residents of one such shack settlement, The Park, who moved to new, 'formal' houses in The Village at the turn of the millennium.

The subject of the present inquiry is the approach-to-the-truth research, which started with the publication of Sir Karl Popper's *Conjectures and Refutations*. In the decade before this publication, Popper fiercely attacked the ideas of Rudolf Carnap about confirmation and induction; and ten years later, in the famous tenth chapter of *Conjectures* he introduced his own ideas about scientific progress and verisimilitude (cf. the quotation on page 6). Abhorring inductivism for its appreciation of logical weakness rather than strength, Popper tried to show that fallibilism could serve the purpose of approach to the truth. To substantiate this idea he formalized the common sense intuition about preferences, that is: B is to be preferred to A if B has more advantages and fewer drawbacks than A. In 1974, however, David Miller and Pavel Tichy proved that Popper's formal explication could not be used to compare false theories. Subsequently, many researchers proposed alternatives or tried to improve Popper's original definition.

This book studies the art and science of analyzing, assessing and anticipating environmental change. Among the issues considered are the observational evidence, the changing public perception of the environment, functions of the environment and its use. Coverage also reviews a series of four prominent cases, namely climate change, the emissions of gasoline lead into the atmosphere and water bodies, fisheries policies and the management of marine oil pollution.

The impact of religion on family and reproduction is one of the most fascinating and complex topics open to scholarly research, but the linkage between family and religion has received no systematic comparative study. This book explores relationships between religion and demography the nineteenth and early twentieth century. The book offers a wealth of descriptive information on family life and fertility in different national and religious settings, and rich conceptual insight.
