Helping you teach What a Geologist Sees.

The Fifth Edition of this bestselling textbook features stunning art, the most up-to-date science, and a wealth of online learning tools, all developed under the critical eyes of Stephen Marshak. Heavily revised with remarkably detailed photographs, animations, and maps, the text offers rich and engaging pedagogy, an expanded chapter on energy, and coverage of recent global events, from Hurricane Sandy and the Washington Landslide to Typhoon Haiyan and the Japanese Tsunami.

The Student Lecture Art Notebook to accompany Earth: Portrait of a Planet is the perfect complement to the outstanding art program. This powerful learning tool contains all of the major diagrams from the text in full 4-color, with the ample room for taking notes.

"An audacious and concrete proposal—Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet." —Jedediah Purdy, *New Republic* In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve

File Type PDF Earth Portrait Of A Planet 4th Ed By Stephen Marshak Ebooks About Earth Portrait Of A Planet 4th Ed By Steph

the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), Half-Earth argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature. Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).

Autistic and nearly nonverbal, twelve-year-old Nova is happy in her new foster home and school, but eagerly anticipates the 1986 Challenger launch, for which her sister, Bridget, promised to return.

In this portrait of Planet Earth—at just about the mid point of its probable lifespan—biologist Stanley A. Rice discusses the evolution of the network of life and the crucial role played by humans in determining the future of our world. Unlike most books on earth history, which present the story of life on our planet in terms of one chronological period after another, Rice discusses Earth's teeming diversity in terms of pivotal evolutionary developments. Among these he stresses the importance of symbiosis, sex, and altruism as key determinants of the Earth's biodiversity. Symbiosis—when single cells began working together—sparked the sudden appearance of complex animals. Much later symbiotic relationships led to flowering plants that depended on animals for pollination and seed dispersal. With the advent of sexual selection, there developed an astonishing world of complex behavior and a dizzying array of life forms. In humans, sexual selection exerted a great influence on the development of our large brains. Altruism—when species learned to work together—resulted in even greater variety and complexity. In early humans, altruism gave rise to ever-widening social circles and the spread of culture. Rice also discusses the role of

File Type PDF Earth Portrait Of A Planet 4th Ed By Stephen Marshak Ebooks About Earth Portrait Of A Planet 4th Ed By Steph

photosynthesis in establishing and maintaining life on earth; the evidence for ancient natural catastrophes, which caused widespread extinctions; and the importance of religion and the recent use of scientific reasoning in the development and the future of the human species. Rice's eloquent, panoramic perspective is well designed to foster an appreciation for the scope of life on Earth and to encourage wise stewardship of the natural world on which our survival depends. Stanley A. Rice, PhD (Durant, OK) is the author of *Green Planet: How Plants Keep the Earth Alive*, *The Encyclopedia of Evolution*, *The Encyclopedia of Science and Technology*, and (forthcoming) *The Encyclopedia of Biodiversity*. He is a professor in the Department of Biological Sciences at Southeastern Oklahoma State University.

The #1 international bestseller: An astronaut's tour of our planet from the heavens, featuring 150 mesmerizing photographs (with commentary) from the International Space Station. During his six-month mission to the International Space Station, astronaut Tim Peake became the first British astronaut to complete a spacewalk -- and, perhaps more astonishingly, the first to run an entire marathon in space. During his historic mission, he captured hundreds of dazzling photographs, the very best of which are collected here. Tim captures the majesty of the cosmos and of the planet we call home: breath-taking aerial photos of the world's cities illuminated at night, the natural beauty of the northern lights, and unforgettable views of oceans, mountains, and deserts. Tim's lively stories about life in space appear alongside these photographs, including the tale from which the title is taken: his famous wrong number dialed from space, when he accidentally called a stranger and asked: "Hello, is this planet Earth?" With this truly unique perspective on the incredible sights of our planet, Tim demonstrates that while in space, hundreds of miles above his friends and family, he never felt closer to home.
