MF (moisture-free) or dry indicates that the fuel heating value has been measured after the fuel has been dried of all inherent moisture but still retaining its ash-forming minerals. MAF (moisture- and ash-free) or DAF (dry and ash-free) indicates that the fuel heating value has been measured in the absence of inherent moisture- and ash-forming minerals.

Heat of combustion - Wikipedia

Since a heat pump is more efficient than a gas furnace at higher temperatures, the dual fuel system defaults to a heat pump on milder days. Natural gas is more efficient for bigger heating loads, so the dual fuel system uses gas when temperatures get really low. If it were always that simple, you'd be all-in for dual fuel no matter what. So ...

All times given are for fuel burned in a furnace. When burned in a blast furnace or smoker, fuel is burned twice as fast but produces the same number of items. Items in red are not stackable, items in yellow only stack up to 16. Calculated as the burning time divided by the number of logs used to make one fuel. Items in red are not made entirely of wood.

Furnace/table – Official Minecraft Wiki

It's called a dual fuel heating system. The idea behind dual fuel is simple. Heat strips are expensive, so it's better to use natural gas when it's really cold outside. At the same time, natural gas isn't all that efficient when outdoor temperatures are in the 40s or 50s. Therefore, use a heat pump for cool weather and a gas furnace for cold ...
