An attempt to compare the cost of overhauling a jet engine at alternative overhaul facilities must consider the various costing concepts and methods involved. Stated costs which are presented without a reference to included and excluded cost elements are often misleading and unrealistic. Major differences between a government facility and a private facility in regards to operating costs must be identified and included in any cost comparison. The report presents the basic costing methods pursued by two overhaul facilities and discusses the various cost effects which the two methods are likely to produce. A final cost comparison is presented after consideration of these effects. (Author).

Cost estimation is a wide open area within the Department of Defense and accurate cost estimating models are a valuable tool in the life cycle costing of a weapon system. This research effort utilized multiple linear regression analysis to develop parametric cost models or cost estimating relationships (CERs) for jet engine depot overhaul costs. Both engine operating parameters, e.g., turbine inlet temperature, RPM, etc., and engine physical characteristics, e.g., length, weight etc., were considered as probable cost drivers. Extensive analysis was performed

to determine the reliability of the data base. The major finding of this study was that models can be developed with acceptable explanatory power, with respect to variation in the data base, using data of questionable reliability. Thus, a model developed should not be accepted on the basis of explanatory power alone but should be tested further to determine its utility as a cost estimator. (Author).

Aircraft engine repair costs labeled as actual on three reports were investigated. From an initial survey it appeared that these actual repair costs should be identical for the same model, design, and series engine when in fact they were not. By examining the procedures used to generate each report and certain facts concerning each report, it was found that the differences were explainable and justifiable. Each reported actual cost did not conform to the accepted accounting definition and did not accurately describe the type of cost involved. A recommendation was made to change the terminology to preclude misunderstanding and confusion arising from a very complex cost system. (Author).

The Life Cycle Cost (LCC) for jet engines includes the cost of design and development, test and evaluation, production, operation and support, and where applicable, disposal. Although only a small portion of the total LCC is incurred prior to production, the decisions made up to that point determine most of the total engine LCC. It is during this early design phase that there is insufficient operational

information on the new engine to permit prediction of costs incurred during the operation and support phase of LCC. Estimation of LCC is further hindered by the absence of knowledge about techniques which could be used during engine design. This research involved a systematic investigation of the models and techniques used by the Air Force Logistics Command to estimate jet engine operation and support cost. These models and techniques are used in the areas of requirements determination for recoverable spares, engine overhaul, and total annual support-cost estimates for recoverable items. They are characterized to allow a determination as to their applicability for use during engine design. (Author).

Maintainability is of crucial importance throughout industry and is established as one of the most important issues in the aerospace and defence arena. No new system can be introduced without full maintainability, analysis and demonstration; a type of analysis which reduces life cycle costs by decreasing operational and maintenance costs and increasing systems operational effectiveness, leading in turn to the creation of more competitive products. This book establishes the full methodology for maintainability mathematics and modelling, as well as the relationship between the maintainability and maintenance processes.
