An oil pressure sending unit controls either the oil pressure light or gauge in your dashboard. When it detects oil pressure in the vehicle, a switch trips and either the light shuts off, or the gauge becomes active. A faulty oil pressure sending unit can result in inaccurate oil pressure readings and warnings.

Your fuel sending unit is a fuel level sensor inside your gas tank that measures the amount of fuel in the tank. The sending unit is submerged in fuel, which can cause it to wear out over time. Corrosion, wiring problems, and wear and tear can all damage a fuel sending unit. O'Reilly Auto Parts offers fuel sending units for a variety of vehicles.

The sender unit is mounted through the tank wall, and removing it leaves a hole. If it is in the tank side, removing it may let petrol gush out. You must be sure that the fuel level is well below the sender hole - and this is difficult to judge with the gauge not working. You may be able to check the level through the filler with a dipstick. Only if all else fails should you drain the tank.
