In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. At the same time, all physical relationships and interactions have to be taken into account.

Jeremy Clarkson gets under the bonnet in Clarkson on Cars - a collection of his motoring journalism. Jeremy Clarkson has been driving cars, writing about them and occasionally voicing his opinions on the BBC's Top Gear for twenty years. No one in the business is taller. In this collection of classic Clarkson, stretching back to the mid-1980s, he's pulled together the car columns and stories with which he made his name. As coal mines closed and house prices exploded to a soundtrack of men in make-up playing synthesizers, Jeremy was already waxing lyrical on topics as useful and diverse as: \* The perils of bicycle ownership \* Why Australians - not Brits - need bull bars \* Why soon only geriatrics will be driving BMWs \* The difficulty of deciding on the best car for your wedding \* Why Jesus's dad would have owned a Nissan Bluebird \* And why it is that bus lanes cause traffic jams Irreverent, damn funny and offensive to almost everyone, this is writing with its foot to the floor, the brake lines cut and the speed limit smashed to smithereens. Sit back and enjoy the ride. Praise for Jeremy Clarkson: 'Brilliant ... laugh-out-loud' Daily Telegraph 'Outrageously funny ... will have you in stitches' Time Out 'Very funny ... I cracked up laughing on the tube' Evening Standard

Confined to Mitch's beachside cabin, Tash finds it increasingly difficult to resist her delicious protector.... The Wild Ones duet continues with The Rebel and the Heiress, available next month!

This book provides a timely evaluation of the EU's ability to act internationally and coordinate policy in a time when it also seeks to meet shifting demands of international cooperation. These include global sustainable development, the challenge of multilateralism and the changing geopolitical order. Analysing the networks of officials and policy professionals in EU development policy, the book yields theoretical insights into dominant processes that characterise EU governance in international cooperation and assesses their role for policy coordination. Overall, this book concludes that EU policy coordination evades intergovernmental control and demonstrates how the agency of EU institutions depends on efforts of member state officials to defend their priorities and identities. Finally, it shows the need to better understand the EU as a collective international actor, beyond the widespread concern with institutional adjustments, which continuously fail to produce the intended outcomes. This text will be of key interest to scholars and students of European and EU politics, EU foreign policy, EU external relations and more broadly to international relations and international development.

No automobile is more recognizable than the Volkswagen Beetle. Introduced as an affordable motor vehicle for postwar Germany, the little Beetle grew to iconic status in both the automotive world and the world of pop culture. This year-by-year, full-color tribute to the "People's Car" begins with the first models in 1945 and goes on to cover the Beetle's 33-year production run in Germany, it's continued manufacture in Mexico starting in 1978, and the introduction in Spring 1998 of the New Beetle -- a car that reasserted the model's popularity, posted remarkable sales and, like its forbear, transcended the automotive world to become a pop culture sensation.
