Diagnosed with a late-stage cancer, after years of bungled and inadequate medical attention...and then to discover that the best-practice chemotherapy is not available in your province. After her delayed diagnosis of colorectal cancer, Robin McGee reaches out to her community using a blog entitled "Robin's Cancer Olympics." Often uplifting and humourous, the blog posts and responses follow her into the harsh landscape of cancer treatment, medical regulation, and provincial politics. If she and her supporters are to be successful in lobbying the government for the chemotherapy, she must overcome many formidable and frightening hurdles. And time is running out. . . A true story, The Cancer Olympics is a suspenseful and poignant treatment of an unthinkable situation, an account of advocacy and survival that explores our deepest values regarding democracy, medicine, and friendship. Half of the proceeds from the sale of this book go to the Canadian Cancer Society and the Colorectal Cancer Association of Canada....

Electromagnetic distance measurement, by using light and microwaves for direct linear measurements and thus circumventing the need for traditional methods of triangulation, may well introduce a new era in surveying. This book brings together the work of forty-eight geodesists from twenty-five countries. They discuss various new EDM instruments—among them the Tellurometer, Geodimeter, and air- and satellite-borne systems—and investigate the complex sources of error. The book is therefore a unique and comprehensive source on the subject. UNESCO and R.I.C.S. have assisted financially in its production.

When Needy's best friend Jennifer starts acting oddly after a night at a concert by a disturbing rock band, and people from their high school start dying in gruesome ways, Needy tries to find out what happened to Jennifer.

Updated throughout, this highly readable best-seller presents basic concepts and practical material in each of the areas fundamental to modern surveying (geomatics) practice. Its depth and breadth are ideal for self-study. KEY TOPICS: Includes new discussions on the impact of the new L2C and L5 signals in GPS and on the effects of solar activity in GNSS surveys. Other new topics include an additional method of computing slope intercepts; an introduction to mobile mapping systems; 90% revised problems; and new Video Solutions. MARKET: A useful reference for civil engineers

The book has evolved from the author's continuing teaching of the subject and from two editions of a text of the same title. The first edition was published in 1978 by the School of Surveying, Universi ty of New South Wales, Sydney, Australia. Like its predecessors, this totally revised third edition is designed to make the subject matter more readily available to students proceeding to degrees in Survey ing and related fields. At the same time, it is a comprehensive refer ence book for all surveyors as well as for other professionals and scientists who use electronic distance measurement as a measuring tool. Great emphasis is placed on the understanding of measure ment principles and on proper reduction and calibration pro cedures. It comprises an extensive collection of essential formulae, useful tables and numerous literature references. After a review of the history of EDM instruments in Chapter 1, some fundamental laws of physics and units relevant to EDM are revised in Chapter 2. Chapter 3 discusses the principles and applica tions of the pulse method, the phase difference method, the Doppler technique and includes an expanded section on interferometers. The basic working principles of electro-optical and microwave distance meters are presented in Chapter 4, with special emphasis on modu lation/demodulation techniques and phase measurement systems. Important properties of infrared emitting and lasing diodes are discussed.
