Problems with Solutions

Force is an influence on an object that causes it to accelerate. Its units are given in $\text{kg}\cdot\text{m}/\text{s}^2$, or Newtons (N). Force is given by the formula $\vec{F} = m \vec{a}$. Average force is equal to a change in linear momentum over time for a given interval, and

Read Free Physics Force Problems And Solutions

instantaneous force is equal to the derivative of linear momentum with respect to time.
$$F_{\text{avg}} = \frac{\Delta p}{\Delta t}$$

Read Free Physics Force Problems And Solutions

The two masses can be treated as a single 15 kg mass. From $F = ma$, the acceleration of the two blocks must be 2 m/s^2 . Solution $15 \text{ kg } F_{\text{net}} = 30 \text{ N } a = 2 \text{ m/s}^2$ In order for the 10 kg to accelerate at 2 m/s^2 , it must experience a net force of 20 N (a 10 N force must pull the block left).
