In addition, we will also cover the circuits that generate and work with pulse signals. Audience A reader who is interested in the basics of pulse and sweep related circuits and who aspires to have an idea regarding the generation and applications of pulse and sweep signals, can go ahead with this tutorial.

~~Tutorials point~~

The reflected radar energy is detected by radar pulse receivers which use both pulse and digital circuits together. The pulse and digital circuits in radar pulse receivers are used to show the location and distance of objects which have reflected the radar transmitter's high powered pulses.

A digital circuit is used to alter the waves into pulse waves. It measures a waveform thousand of times every second and stores the data in binary form. For instance, after 12msecs, a signal might be 2.4 volts high & after 14msecs, it might be at 2.6 volts.
