AbstractThis paper presents the PSIM simulation of single phase unipolar sinusoidal pulse width modulation (SPWM) inverter with load voltage regulation. From the point of view of minimization of current distortion, inverter switching strategies can be classified in to two categories; one is unipolar current controlled inverter and another is the bipolar current controlled inverter.

The simulation of the single-phase unipolar voltage switching inverter device model is simulated in Matlab/Simulink. The modulation ratio change from 0.4 to 0.9 by varying amplitude of modulating signal. The outputs voltage and current %THD waveforms for variable AC voltages and modulation index are observed on scope, and also see the THD.SPWM techniques are characterized by constant amplitude pulses with different duty cycle for each period.

Overview. Models. Its a simple model simulation of an npc inverter (also called as diode clamped multilevel inveter),its called as multilevel inverter because of its stepped output in this case 3 level ,here modulation/control strategy used is spwm (with triangular level shifted control signals and sinusoidal phase shifted signals),the result of line voltages Vab,Vbc,Vca are shown , NOTE: the phase voltages are of 3 levels (i.e voltage across each leg or phase) whereas the line voltages are ...
