It seems the User Manual is only available in a HTML format which is fine on the computer but I am looking for a way to save it as a PDF file so I can load it into my iPad2.

An engaging, witty account of the people, customs, food, and culture of Cuba framed by a fascinating approach to travel. With only a folding bicycle and a towable suitcase, Australian Lynette Chiang spent three months touring Cuba, eshewing tourist hotels and typical itineraries in favor of an unpredictable day-to-day existence among ordinary citizens. She discovered a people who, despite great privation, are warm, generous, and generally happy. Her narrative covers equally well the challenges of travel on two wheels and the surprises of life in the land of Fidel.

Hydatid disease (echinococcosis), caused by the tapeworm Echinococcus is a public health and economic problem of global proportions. Treatment of this zoonotic infection usually requires major surgery and the prognosis for some forms of the disease is poor. Control efforts have had little impact globally and new foci of infection and regions of endemicity have recently been recognized. However, in addition to its medical, veterinary and economic significance, Echinococcus is an intriguing biological phenomenon. This book presents a complete synthesis of all aspects of 'Echinococcus' and hydatid disease. It builds on the success of a previous volume (The Biology of Echinococcus and Hydatid Disease, Allen and Urwin, 1986), and details the major advances that have taken place since. In addition, the scope of the book has been broadened to include genetics, evolutionary biology, epidemiology and clinical features. The overriding theme of the book is that a comprehensive understanding of the biology of Echinococcus is essential for the effective treatment and control of hydatid disease. The links between laboratory knowledge and field applications are emphasized throughout the book. Consequently, research workers, teachers and students of parasitology, clinicians and field workers, will find this work an indispensable source of information, but it will also provide a model for the integration of basic and applied research in parasitology

The European zebra mussel in the Great Lakes, a toxic Japanese dinoflagellate transferred to Australia—such biologically and economically harmful stowaways have made it imperative to achieve better management of ballast water in ocean-going vessels. Stemming the Tide examines the introduction of nonindigenous species through ballast water discharge. Ballast is any solid or liquid that is taken aboard ship to achieve more controlled and safer operation. This expert volume Assesses current national and international approaches to the problem and makes recommendations for U.S. government agencies, the U.S. maritime industry, and the member states of the International Maritime Organization. Appraises technologies for controlling the transfer of organisms—biocides, filtration, heat treatment, and others—with a view toward developing the most promising methods for shipboard demonstration. Evaluates methods for monitoring the effectiveness of ballast water management in removing unwanted organisms. The book addresses the constraints inherent in ballast water management, notably shipboard ballast treatment and monitoring. Also, the committee outlines efforts to set an acceptable level of risk for species introduction using the techniques of risk analysis. Stemming the Tide will be important to all stakeholders in the issue of unwanted species introduction through ballast discharge: policymakers, port authorities, shippers, ship operators, suppliers to the maritime industry, marine biologists, marine engineers, and environmentalists.
