This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major strength of this book – published under the auspices of the EUGMS – is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

A clearly written, introductory psychiatric text guided by the current Institute of Medicine domains and including national board-style review questions.

As part of the American Medical Association (AMA) ' s Accelerating Change in Medical Education Consortium ' s work, Health Systems Science (HSS) is establishing itself as the third major branch of a balanced medical education, alongside basic and clinical sciences. Health Systems Science Review is a first-of-its-kind review book designed to prepare future physicians and other health care professionals to function effectively within health systems by better understanding how health care is delivered, how health care professionals work together to deliver that care, and how the health system can improve patient care and health care delivery. This study tool provides case-based questions followed by discussions of answers and suggested readings—making it a valuable review resource for medical students and instructors, as well as medical residents; nursing, allied health, and public health students; and hospital administrators. Meets a growing need for an effective, targeted review tool on HSS, a topic increasingly covered on the USMLE and other exams. Contains 250+ case-based, multiple-choice questions, with extensive discussion of correct and incorrect answers. Offers an up-to-date, effective review to support and assess competence in HSS, covering health care delivery and processes, health care policy and economics, clinical informatics and technology, social determinants of health, patient safety, teamwork and collaboration, systems thinking and complexity science, and much more. Provides highly relevant content applicable to today ' s evolving health care delivery written by experts in emerging areas of HSS. Serves as an excellent study companion for the ground-breaking book, Health Systems Science, by Susan E. Skochelak, MD, MPH, et al., also developed by the AMA ' s Accelerating Change in Medical Education Consortium, which is at the forefront of change and innovation in medical education.

Study Skills and Test-Taking Strategies for Medical Students: Find and Use Your Personal Learning Style provides techniques that identify and apply the medical student's personal learning style to specific study skills and exam-taking strategies so that understanding, analysis, synthesis, and recall of information occur in a time-efficient manner. This volume in the Oklahoma Notes Series is written for talented medical students who were excellent scholars in undergraduate school but find themselves overwhelmed with the information explosion and time constraints of medical school.

# 1 best selling book in its class! How to Study in Medical School, 2nd Edition provides a thorough and comprehensive method for studying the Basic Sciences in medical school and leaves no detail behind. Dr. Kamyab's unique system of studying is an effective study process that not only helps you understand the material and stay-up-to date, but also helps you retain the information for your medical school tests, your licensing examinations, your clinical rotations, and beyond. Unlike similar books written by authors with Education Degrees or PhD Professors, this is one of the few books in its class that is written by a Medical School graduate. It is therefore written by an author who has gone through the process, and knows how to study effectively and succeed in Medical School. The 2nd Edition includes new chapters and a new frequently asked questions section. If you are starting medical school and are serious about succeeding, pick up your copy today!

Progress Notes is a Bible study guide designed for medical students and residents as they navigate through their years of medical training and spiritual formation as a young adult. There are twelve lessons which may be used on a monthly basis with a mentor or small group. The topics are relevant to the challenges students and residents face, and are arranged according to the beginning, middle, and end of a year of training before moving on to the next step. The appendix includes twelve devotions on the same topics and can be used between meetings to reinforce the lessons and to keep God's word fresh in their minds. Some of the topics include expectations, evaluations, frustrations, finding meaning in the mundane, delayed gratification and entitlement, and refusing to be offended. The devotions have also been used as a springboard for discussion within a small group meeting. These studies have been used by medical students, residents, and community physicians. They have also been used by mentors with one other trainee, fairly large groups of Christian physicians and residents, women physician groups, and small groups of interns. They have facilitated great discussions and rich times of prayer and fellowship in each of these different settings. The studies grew out of first hand experience with the successes and frustrations of medical training and the joy and sorrows of following Christ. Years later when her own students were experiencing the same obstacles and emotions, the author determined to create a resource to facilitate faith development in physicians. The studies were designed after significant research including needs assessments, focus groups, and literature reviews of spiritual formation, discipleship, and professionalism in medicine. It is no surprise that these lessons hit home, and cause the reader to gain a new perspective on integrating their faith with their practice!
