These two registers TH and TL are timer high byte and timer low byte, 0 and 1 are the timers numbers. They are 16-bit registers. we give our time delays in it. since 8051 is an 8-bit micro controller, we access its register in two bytes one byte for TH (timer high byte) and one for TL (timer low byte). How to calculate values for TH and TL registers here is an example click on the link below.
