Once upon a time, only typesetters needed to know about kerning, leading, ligatures, and hanging punctuation. Today, however, most of us work on computers, with access to hundreds of fonts, and we'd all like our letters, reports and other documents to look as good - and as readable - as possible. But what does all the confusing terminology about ink traps, letter spacing, and visual centring mean, and what are the rules for good typography? Type Matters! is a book of tips for everyday use, for all users of typography, from students and professionals to anyone who does any layout design on a computer. The book is arranged into three chapters: an introduction to the basics of typography; headline and display type; and setting text. Within each chapter there are sections devoted to particular principles or problems, such as selecting the right typeface, leading, and the treatment of numbers. Examples throughout show precisely what makes good typography - and, crucially, what doesn't. Authoritatively written and designed by a practitioner and teacher of typography, Type Matters! has a beautifully clear layout that reinforces the principles discussed throughout.

Legibility literally means "able to be read". This ability to be read combines visibility (the quality of being seen) with comprehension (understanding). Perception has a lot to do with legibility. It is by this complex process that we select, interpret and organize sensory stimuli into coherent pictures; then these shade into perception as we relate what we see and feel with past learning.

Type Matters bridges the scholarship of typography and design with the field of rhetoric. Contributors address the ways in which and places where typography enacts or reveals rhetorical principles.

This volume challenges the widely held assumption that the professional practice of student affairs administration transcends the influence of organizational culture. Based on data and commentaries from more than 1,100 practitioners, this book describes how the experience of student affairs administrators varies by institutional type. The findings paint a multifaceted and integrated portrait of the profession. For instance, the standard bearers at liberal art colleges share as much in common with the generalists at comprehensive institutions as they do with the interpreters at religiously affiliated campuses. The specialists at research universities are juxtaposed against the producers at community colleges, however they have closer ties to the change agents at Hispanic-serving institutions. The work of the guardians at historically Black colleges and universities is linked to practice at both liberal arts and community colleges. Where You Work Matters offers current and future administrators a greater appreciation for the vibrancy and complexity of the student affairs profession.

This volume presents recent developments in the area of Lévy-type processes and more general stochastic processes that behave locally like a Lévy process. Although written in a survey style, quite a few results are extensions of known theorems, and others are completely new. The focus is on the symbol of a Lévy-type process: a non-random function which is a counterpart of the characteristic exponent of a Lévy process. The class of stochastic processes which can be associated with a symbol is characterized, various schemes constructing a stochastic process from a given symbol are discussed, and it is shown how one can use the symbol in order to describe the sample path properties of the underlying process. Lastly, the symbol is used to approximate and simulate Levy-type processes. This is the third volume in a subseries of the Lecture Notes in Mathematics called Lévy Matters. Each volume describes a number of important topics in the theory or applications of Lévy processes and pays tribute to the state of the art of this rapidly evolving subject with special emphasis on the non-Brownian world.

What are rising powers? Do they challenge the international order? Why do some countries but not others become rising powers? In Why Nations Rise, Manjari Chaterjee Miller answers these questions and shows that some countries rise not just because they develop the military and economic power to do so but because they develop particular narratives about how to become a great power in the style of the great power du jour. These active rising powers accept the prevalent norms of the international order in order to become great powers. On the other hand, countries which have military and economic power but not these narratives do not rise enough to become great powers--they stay reticent powers. An examination of the narratives in historical (the United States, the Netherlands, Meiji Japan) and contemporary (Cold War Japan, post-Cold War China and India) cases, Why Nations Rise shows patterns of active and reticent rising powers and presents lessons for how to understand the rising powers of China and India today.
