I think it's interesting though. I think it's interesting that in some sense that that's all happiness is, for surely if everyone were the freckle in the tar then there would be no tar-then we would all wish to be the tar bit in the freckles. If everyone were pyscho-drunk-out-all-their-fingers-off-with-a-steak-knife-f*cked-up at the bar, then who in the f*ck would really think it interesting to put such a story in the news? If everyone wore a smile and you never saw even one cloud in the wink of all your days then who in the f*ck would be relieved by another? And it's fun to twist and spit on the plot-fun to run the f*cking lawn mower through the fence and see how far it goes-fun to take your mattress outside and jump on it naked in the middle of the street-but oh my oh my if we didn't make each other feel like a night cry in the murmur then we would have no reason to murder each other and oh my oh my what a pleasure it is to murder each other-what a pleasure it is for me to come home and cry-to stop crying and stop being such a pussy-to not stop stopping being such a pussy and fill-up a red-container with Mario's juice and burn Uber to my feet-make them feel like me-make them lose the one-moment that feels to be the one that lasts-make them unmake them.

The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring" - the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation.
